### Don't let the Bed Bugs Bite

Prevention is essential to avoiding a bed bug infestation in your home. Even the cleanest houses, hotels or apartments can get bed bugs, but regular inspection and cleaning can help you prevent an infestation.

1. Learn to identify bed bugs:

If you find any bedbugs kill them immediately. They are small (size of an apple seed) and oval with wingless bodies that are reddish-brown in color.

2. Get rid of places where bed bugs can hide:

Bed bugs love to hid in cluttered areas.

3. Be careful about what you bring into your home:

Don't bring mattresses, couches, or box springs you find on the street or in and around the dumpsters, into your home.

4. Check your home regularly for bed bugs:

Check behind picture frames, curtains and in beds (mattress and box springs) bedframes, headboards and nightstands. Couches and upholstered furniture. Around doorframes and window sills and behind baseboards. Check areas where your pets sleep too.

5. If you see something report it immediately to the Leasing Office:

Waiting to call pest control will only make the infestation worse.
